TEAS' NEW WESTMORELAND ORANGE, THE COMING ORANGE FOR SOUTHERN HOMES AND ORCHARDS

TREES FOR FRUIT, SHADE AND ORNAMENT FLOWERING SHRUBS, ROSES, ETC.

STATE OF TEXAS, DEPARTMENT OF AGRICULTURE

Certificate of Inspection of Nursery Stock.

This is to Certify that in accordance with the provisions of the Orchard and Nursery Inspection Law of the State of Texas, the nursery stock grown for sale, exhibited and held for sale, by Teas Nursery Co., Edward Teas, Manager, at Houston and Pasadena, Texas, has been inspected by J. B. Wolfe, a duly authorized agent of this Department, and at the time of the inspection said nursery stock was found apparently free from dangerous insect pests and dangerously contagious tree and plant diseases.

A printed copy of this certificate on any shipping tag attached to any shipment of nursery stock is authority to any freight or express agent in Texas to accept said shipment for transportation. This Certificate is void after July 1st, 1911.

Austin, Texas, September 10th, 1910.

Approved:

Ed. R. Kone, Commissioner of Agriculture. SAM H. DIXON Chief Inspector of Orchards and Nurseries.

[Seal]

No. 13

CERTIFICATE OF INSPECTION OF NURSERY AND PLANT COLLECTIONS.

ISSUED BY MISSOURI UNIVERSITY AND EXPERIMENT STATION.

Columbia, Mo., August 16th, 1910.

TO WHOM IT MAY CONCERN:

This is to certify that on the 16th day of August, 1910, the stock of trees, shrubs and other plants of the Teas Nursery Co., Edward Teas, Proprietor, grown in his nurseries and plant establishments, at and in the vicinity of Joplin, Jasper County, Missouri, was examined and no indication found of San Jose Scale, Brown Tail Moth, Peach Yellows, Rosette, or other Dangerous insects or plant diseases liable to be distributed or disseminated on fruit trees or other plants usually known as nursery stock. This Certificate is good for one year from date of inspection.

W. H. CHANDLER,

Deputy Inspector.

LEONARD HASEMAN, Entomologist.

ANNOUNCEMENT

In presenting our Catalogue, it is our aim to offer the best and most thoroughly tested varieties of Citrus and other fruit, shade and ornamental

trees, flowering shrubs, plants, etc.

Horticulture in the South is attracting almost world-wide attention, and the rapid progress and extensive plantings, every year increasing in volume and profitable productivity, are rapidly bringing this section of the country into prominence. As one of the important orange and figgrowing countries, this section bids fair to rival Florida and California, but the success of the planter is influenced to a large extent by the kind and quality of nursery stock planted. The planter should use the greatest care in the selection of strong, vigorous, healthy, home-grown trees, carefully dug and handled and given proper care and cultivation after planting. All around us are successful orchards, whose prosperous owners reap rich rewards for their care and labor.

NOTED SHELL ROAD FROM HOUSTON TOWARD GALVESTON
PASSES NEAR OUR NURSERIES

Location. We have extensive nursery plantings at Pasadena, Texas, ten miles southeast of Houston on the G. H. & S. A. Ry., toward Galveston. Our large blocks of citrus trees are as fine and vigorous as can be grown in any country, and we invite purchasers to inspect them.

At Westmoreland Farms, six miles southwest of Houston, we are growing a complete line of general nursery stock, giving special attention to the interests of the fruit grower and planter, with demonstration grounds for testing new and promising varieties of fruits and plants.

At Joplin, Mo., we grow a general line of nursery stock, giving special attention to the ornamental departments and landscape planting.

Visitors Welcome. We take pleasure in showing our stock to parties wishing to purchase.

Nursery Inspection. All our nurseries are duly inspected by the State Inspectors of Nurseries and Orchards, and certificates of inspection accompany all shipments.

Terms and Conditions. Terms, cash with order. Orders booked in advance of shipping season should enclose twenty-five per cent. with the order, and balance when shipping season opens. Trees will be shipped C. O. D. when twenty-five per cent. accompanies the order.

Low Express Rates. The express companies give us the benefit of the General Special rate of twenty per cent. off, and pound rates, which greatly lessens cost of transportation, and we recommend shipping by express, unless shipment is very heavy. When no shipping directions are given we will use our own discretion.

Guarantee. Our aim, during a lifelong experience in the nursery business, has been to supply our patrons with the best trees and plants, true to name, intelligently grown and carefully handled, and we have always found pleased customers our most profitable advertisements, and the best assets in the nursery business. In case errors occur, we will cheerfully replace any trees that prove untrue to name, or refund the purchase price of same, but our liability in all cases is limited to the amount of the original price received.

Transportation at Purchaser's Risk and Expense. All transportation charges are to be paid by the purchaser. Our responsibility ceases upon delivery in good order to the forwarding companies, to whom claims for loss or damage must be made. We will, however, trace shipments when notified, and use every means at our command to secure prompt delivery, or recovery, in case of damage or loss.

Prices in this list are subject to change without notice.

Certificates of nursery inspection will accompany all shipments of stock.

Distance to Plant, and Number of Trees for an Acre. Local conditions, limited space, cost of land and environment govern the distance to a certain extent, but we recommend planting oranges, grape-fruit, lemons, figs, pears, plums, peaches, etc., about eighteen feet apart each way, although many orchards are planted fifteen feet apart, and others twenty feet. Pecans should not be planted closer than forty feet apart.

Trees planted 15x15 feet require 193 to an acre.

* *		18x18		4.4	134		4.4	
4.4	4.4	20x20		4.4	109	" "	4.4	4.4
4.6	4.4	40x40	4.6	4.4	27	6.6	4.4	4.4

Pecans may be planted every third space with good results in combination with figs or oranges at the above distances.

Rule for Finding Number of Trees to an acre. Multiply the distance apart each way and divide into 43,560.

Spraying. Information will be supplied without charge on application. We also supply apparatus at moderate cost for using the different preparations.

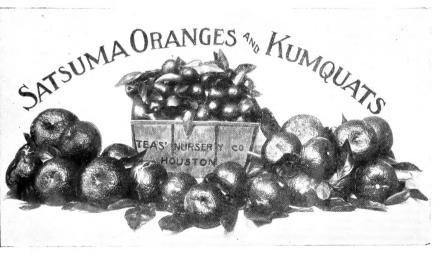

CITRUS FRUITS

We have to offer an unusually fine, large stock of the best and hardiest varieties of Oranges as well as Grape-Fruits, Kumquats and Lemons. All our Citrus trees are propagated on the cold-resisting Citrus Tri-

foliata. This Oriental Orange has withstood the winters without pro-

tection in our Missouri nurseries for more than twenty years.

The success of the Orange industry in the Coastal Country is due to the hardiness imparted to the trees when budded on Citrus Trifoliata, which ripens its fruit in August, matures its growth, and sheds its leaves late in autumn, and remains in dormant condition throughout the winter months. Our finest varieties of oranges budded on this stock are governed

by it, and, being dormant in winter, withstand occasional cold spells that would injure or destroy the ordinary type of oranges and lemons on their own roots, or on the sweet and sour stocks on which Citrus trees are usually budded, owing to the tendency to grow all winter, unless checked by sudden cold, which often kills the trees outright on account of their not being in dormant condition.

Oranges budded on this hardy species not only withstand much more cold, but also produce fruit several weeks earlier in season, of finer quality, and the trees begin to bear at a much earlier age. Little trees in the nursery rows are frequently loaded to the ground the second year with

fine, large oranges.

For more than fifty years orange trees have grown and fruited through the Coast Country, but not until the introduction of this hardy species has orange growing become an entire success and a most interesting and profitable industry.

TEAS' NEW WESTMORELAND ORANGE

(ILLUSTRATED ON COVER PAGES)

The coming orange for Southern homes and orchards. Tree very hardy, vigorous and productive; fruit round, very large size, finest quality, very thin skin and few seeds. Highest endorsements from the leading citrus experts.

The Westmoreland Orange, having originated near the northern limit of orange culture possesses, in addition to fine quality, the great hardiness necessary to make it a successful commercial variety. The original tree is now fifteen years old and is one of the largest orange trees in the State, being nearly four feet in circumference at the ground and more than twenty feet high, and has not failed to produce a crop of fruit since it began bearing years ago.

Its great hardiness is shown in having withstood the record-breaking winter of 1889, which killed the groves in Florida, as well as almost all of the orange trees in Texas. This tree came through this winter with slight injury, although no protection had been given it, and has not sustained the slightest injury in any of the cold winters since this time.

Last winter the tree was covered with ice and the mercury fell below 17 degrees without injury to the tenderest twigs, which grew after the late fall rains.

ORANGES

Satsuma. Fruit medium size, flattened, rind separates readily from the segments, and may be eaten without soiling the hands, hence the name "Kid Glove Orange." Color, deep yellow, handsome appearance, fruit fine, sweet, tender, and juicy, delicious, almost seedless, ripening in October and November. Trees grow spreading and low branched, and begin bearing at a very early age, frequently bearing profitable crops at three years. Hardiest known variety of edible orange, which during the past ten years has not missed bearing a profitable annual crop.

The great hardiness, remarkable productiveness, and fine quality of the Satsuma orange have been the leading factors in establishing the Citrus industry of the Gulf States, which now bids fair to rival both California and Florida.

Price:	Е	ach	10	100
Trees under 1 foot in height	. \$. 30	\$2.75	\$25.00
1 to $1\frac{1}{2}$ feet in height		. 35	3.25	30.00
$1\frac{1}{2}$ to 2 feet in height		. 40	3.75	35.00
2 to $2\frac{1}{2}$ feet in height		. 50	4.75	45.00
$2\frac{1}{2}$ to 3 feet in height		. 65	6.25	60.00
3 to 4 feet in height		1.00	8.50	75.00

Dugat. South Texas variety, very productive, somewhat later than Satsuma, fruit round, sweet, juicy and good flavor.

Parson Brown. A splendid grower, upright and one of the hardiest of the round orange type, fruit large, fine quality, early and prolific bearer, and one of the best for home use and extensive planting.

Pineapple. Same type as the Parson Brown, highly recommended.

Homosassa. Medium size, thin skin, fine quality, good keeper.

Magnum Bonum. Large size, flattened, fine quality.

Nonpareil. A very desirable early variety, medium size, fine quality, vigorous grower and productive.

Each 10 100

Price of Round Oranges above noted; trees mostly

2 to 3 feet in height.....\$.60 \$5.50 \$50.00

LEMONS

Villa Franka. Fruit of medium size, thin, smooth rind, fine, juicy, strong acid, of best quality for home or commercial planting.

Ponderosa. Fruit of immense size, weighing from $1\frac{1}{2}$ to $2\frac{1}{2}$ pounds, of fine quality and very prolific. Tree an interesting sight when loaded with the immense lemons.

Each 10 100

Price. Fine trees mostly 2 to 3 feet in height....\$.60 \$5.50 \$50.00

GRAPE-FRUIT-POMELO

Duncan. Large size, smooth, quality the best. Strong grower and prolific bearer.

Marsh Seedless. Large, very smooth, excellent flavor, almost seedless.

KUMQUATS

The smallest of the orange family. Tree of upright growth and very handsome at all seasons of the year, and particularly so throughout the late summer and fall, when laden with its small golden fruits the size of plums. The trees are extremely hardy and should be planted wherever oranges are grown. The fruit is eaten without removing the rind, and is excellent for marmalades, jellies and crystallized fruit. Negami, fruit cblong. Marumi, fruit round.

Citrus Trifoliata, see page 14.

FIGS

Figs are among the most valuable and easily grown of all fruits, producing abundant annual crops, often under most unfavorable conditions.

Throughout South Texas and the Gulf States they have been growing and fruiting since the earliest settlements more than two hundred years ago, having been planted by the Jesuits around the oldest Missions, and in all sections they have thrived and borne abundantly. On the southern plantations they have been one of the sure crops, prized both for eating in the fresh state and for preserves, beginning to ripen in early summer and continuing till late autum.

MAGNOLIA FIG ORCHARD

In recent years commercial fig-raising has become an important industry, and is so safe and profitable that thousands of acres are being planted annually, while the demand has never been supplied.

The Magnolia Fig is everywhere regarded as the best and most profitable variety for commercial orchard planting. Fruit large, light, purplish red, fine quality, and one of the best for both shipping and preserving. Tree very hardy, vigorous and productive, and with care often bears a profitable cropy the second season after planting.

Celeste, of Sugar Fig. A medium sized blue fig, of finest quality, very sweet, often turns to sugar if left on the tree. The hardiest of all known varieties, excellent for canning and preserving.

Black Ischia. Large, almost black, good quality and productive, valuable for home use, and local market.

Lemon Fig. Color light yellow, fruit sweet and melting, very early and valuable for home use.

4 to 5 feet high	30	2.50	25.00

Smyrna Figs. We have about twenty varieties of Smyrna and Capri figs, in the best varieties, prices on application.

PECANS

The Pecan reaches greatest perfection in the southern states, and particularly in the Gulf Coast of Texas. No fruit or nut tree is more worthy of a place in the home grounds and orchard. Pecans may be planted alone or in combination with oranges or figs by planting pecans not closer than

every second or third space.

Grafted varieties usually begin bearing in five to seven years, and increase in productiveness for generations. Pecan growing in Texas is endorsed by all the leading horticulturists, and Luther Burbank indorses it as the most desirable proposition in the South. Those who have bearing trees of the standard grafted varieties are reaping a harvest of gold, ever increasing for generations to come.

Price,	best grafted varieties:

3 to	4 feet	1.00	each
1 to	5 feet	1 50	onch

JAPAN PERSIMMONS

Combining the useful and ornamental, Japan Persimmons should be in every home ground, garden and orchard. The trees grow readily and begin bearing at an early age and find a ready market at attractive prices. 3.50

Pomegranates. Handsome, hardy, ornamental shrubs with bright showy flowers and deep green foliage. The fruits are large and conspicuous, resembling big red apples and are used in jellies, marmalades and acid drinks. Price35 3.00

Mulberries. Beautiful, quick growing shade trees, valuable for windbreaks and fine fruit for poultry and swine and to keep the birds from valuable crops. Russian and the best everbearing kinds.

Pears. Keiffer and Garber's Hybrid, the leading varieties of the Chinese type do well, and are almost immune from blight. Growers find them productive and profitable. Price40 3.00

Plums. Iapanese and native types. Price 40 3.00 20.00 **Peaches.** Varieties selected for the South. Price, 30 2.5020.00

Grapes. Varieties adapted to the Coastal Country in good assortment.

HARDY FLOWERING SHRUBS

Althea, or Rose of Sharon, handsome, tall growing shrubs of the easiest culture, blooming continuously through the summer and fall.

The large, showy, rose-like flowers are freely produced and range through many shades of red, pink, purple, and variegated to pure white. We have more than twenty choicest named varieties, and strongly recommend them for lawn and landscape planting, as well as hedges and massing, etc.

Price: Strong, well developed, blooming bushes, mostly 3 to 4 feet high, 35 cents each, \$2.50 per 10, \$20.00 per 100. Extra large size, 50 cents

each.

Abelia Rupestris. A very beautiful Chinese shrub with evergreen foliage, and delicate white, sweet-scented flowers, produced through the entire season. Does especially well in the South. Fifty cents.

Cape Jasmine, Gardenia. Flowers large, snow white, very beautiful, delightfully fragrant, foliage dark glossy evergreen. One of the most beautiful shrubs of the South. The flowers are shipped to the northern markets, and frequently yield \$500.00 to \$1000.00 an acre in a single season.

Price: Strong, blooming bushes, 50c each; special price in quantity.

Callicarpa Purpurea, from Japan. A neat growing shrub with small flowers, followed by masses of bright purple berries.

American, Spanish Mulberry, resembles the foregoing, but has larger berries and grows taller.

Calycanthus Floridus. Sweet shrub, fragrant brown flowers.

Chionanthus Virginicus, White Fringe, grows throughout the South, fine feathery, sweet-scented flowers and large handsome foliage.

Crepe Myrtle, Lagerstroemia, vigorous shrubs or small trees, with light green foliage and immense clusters delicate flowers, blooming almost all summer, called the "Lilac of the South." Colors: pink, purple, crimson and white.

Cydonia Japonica, Japan Quince. Bright red flowers, very early in spring, and occasionally all summer, sometimes bears curious fragrant fruit used for jelly and preserves.

Desmodium, Sweet-Pea Shrub, late in summer, a fountain of dainty purple flowers, very graceful, called the "Telegraph Plant."

Deutzia, of Japanese origin, hardy shrubs with pink and white flowers, valuable in shrubbery planting.

Dog-Wood, white-flowering, handsome native trees, with showy "blossoms" early in spring.

Eleagnus, Russian Olive, Umbellatus, Silver Thorn, a small tree with illvery leaves and fragrant blossoms, followed by small edible berries. Diecious both staminate and pistilate forms.

Euonymus Japonica, broad-leaved evergreen shrubs, much used clawns and for ornamental hedges and screens. Price	0
Silver Variegated. Leaves beautifully bordered and mottled wi silver. Price	

Golden Variegated. Leaves bordered with yellow. Price 35c each
 Radicans Variegata, an evergreen vine clinging to walls or masonry, haves mottled green and white; very pretty.

Flowering Willow, Chilopsis, very useful shrubs or small trees, with willow-like foliage and abundant white and purple flowers, produced all summer; endures extreme heat and drouth.

Forsythia, Golden Bell, handsome foliage shrubs with bright, golden yellow flowers, very early in spring, before the leaves appear. Viridissima and Suspensa.

Hibicus Coccinea, very large bright red flowers all summer, plant is an herbaceous perennial and very ornamental among shrubbery.

Jasmine, Nudiflorum, very beautiful low shrub, dark glossy evergreen leaves, and yellow flowers.

Cape. See "Cape Jasmine."

Kerria, or Japan Globe Flower, a neat growing shrub with globular yellow flowers from early spring until frost.

Lonicera Fragrantissima, bush honeysuckle, large shrub, blooming in late fall, winter and early spring with delightfully sweet-scented flowers.

Morrowi, a large, spreading shrub with white flowers followed by showy red berries.

Tartarica, Tartarian or Tree Honeysuckle, charming little shrubs with pink and white flowers, the first shrubs to put forth in the spring.

Ligustrum. See Privets.

Lilac, Persian cut-leaved. The only variety we have grown successfully. Slender branches, divided leaves, purple flowers.

Lennei, Chinese, large purple flowers produced before the leaves in early spring, and occasionally all summer, very conspicuous and ornamental.

Price.....Each 1.00

Mock Orange, (Philadelphus), often called "Syringa," tall shrubs with large showy white flowers, very sweet, an old favorite.

Oleander. White and pink.

Pomegranate. Double scarlet.

PRIVET

Privet California. Of all ornamental hedge plants this is the most popular and more planted than all others combined; dark rich evergreen foliage, of vigorous growth and succeeds even under adverse conditions.

Rhus Typhena Laciniata, Fern-leaved Staghorn Sumac, a curious tree from Vermont, of irregular growth, with foliage like a tree fern.

Sambucus (Elder-berry), native shrub in moist ground, with large panicles of white flowers.

Golden, with beautiful golden foliage.

Cutleaved, fern-like foliage, very effective in shrubbery plantings.

SPIREA

Spirea, or Meadow Sweet. Burnalda, compact little shrub with pink flowers, blooms all summer.

Froebels. Dwarf-growing variety, with red flowers, produced throughout the season.

Golden-leaved, Opulifolia, large spreading shrub with golden leaves and white flowers.

Prunifolia or plum leaved. Called "Bridal Wreath," tall growing with little rose-like double white flowers.

Reevesii, double white flowers in clusters.

Thunbergii, fine feathery foliage and small white flowers; very early.

Van Houtii. Finest of all the spireas, and among the handsomest shrubs in cultivation, a fountain of white flowers, beautiful foliage. One of the most graceful shrubs.

Styrax, from Japan, neat shrub with conspicuoua white, bell-shaped flowers in great profusion; very beautiful.

TAMARISK

Tamarisk, "Salt Cedar," useful tall-growing shrubs, with light airy foliage of silvery cast, and dainty pink blossoms; splendid shrub on the lawn, which may be clipped into any desired form. One of the finest plants for ornamental hedges and wind-breaks and recommended for protection of orange groves.

Amurense. Tallest and the most vigorous in growth, blooming at intervals all summer.

Gallica. Similar to the preceding, but more slender and upright, with red stems.

Native. Fine shady arbors at Corpus Christi of this variety, growing in the edge of the salt water.

African, of more spreading habit, greener foliage. Each 10 100 Strong plants, mostly 3 to 4 feet. 35 2.50 20.00

Vitex Agnus Castus, "Chaste Tree," a large growing shrub with dense spikes of blue and white flowers blooming continuously. One of the good vigorous shrubs for massing.

WEIGELA

Weigela. Low spreading shrubs with handsome trumpet-shaped flowers.

Candida. Tall-growing, pure white flowers produced all summer.

Eva Rathke. Of recent origin, dark red flowers, blooms all summer.

Rosea. A delicate shade of pink, shading to darker.

Rosea Nana Variegata. Similar to Rosea, with foliage beautifully margined and marked with yellow, pink and green; very effective.

SHADE TREES

Ash, American White: a handsome shade tree with luxuriant dark green foliage.

Box Elder, negundo or ash-leaved Maple.

Black Locust: rapid-growing shade tree, fragrant flowers, valuable for timber and posts.

Catalpa Speciosa: large-leaved, rapid-growing, valuable for shade or timber.

Chinese Umbrella tree: native of the South, forming a dense head of green foliage.

Carolina Poplar: a rapid-growing tall shade tree, resembling cottonwood.

Citrus Trifoliata: used as an ornamental tree and also makes fine hedges and wind-breaks.

Price: 1 to 2 ft.

Extra large bushy trees, 6 to 8 ft.

Special price on large lots.

Dogwood: white-flowering, 50 cents.

Elm, American White: large-spreading trees, doubtless the most popular of all shade trees.

Elm, Cork-barked: smaller growing and more dense foliage.

Hackberry: large, handsome shade trees of quick growth, one of our best street trees.

Maple: silver-leaved or soft Maple.

Mulberry, Russian: grows well here, making low-spreading trees, valuable for windbreaks, fine for birds.

*Oak, Pin Oak or Water Oak: nearly evergreen, one of the best of our native shade trees.

Live Oak: native, evergreen, growing to immense size, very handsome dense foliage. Price $25\mathrm{c}$ per foot.

*Willow Oak: fine rounded form, valuable shade tree for lawns and street planting.

Poplar, Balm of Gilead: an old favorite.

Lombardy: a tall, slender tree of rapid growth.

Red Bud Cercis Canadensis, or Judas tree: very showy in early spring, and of value as a shade tree of moderate size.

Sweet Gum, Liquidambar: native, tall, shapely tree, deep green foliage, turning to bright colors in autumn.

Sycamore, American: large-spreading trees of rapid growth, thriving in moist places.

*Price of Oaks, unless noted, see page 15.

Tulip Poplar, or Yellow Poplar: one of the finest shade trees for lawns. Willow, Weeping.

Price of shade trees, unless noted:

6 to 8 feet high	. \$. 50
8 to 10 feet high	75
10 to 12 feet high	. 1.00

^{*}Price of Oaks 15c per foot, unless noted.

ROSES

Queen of all the flowers, and some one has said there is no King. In no place do they develop in greater beauty and perfection than in the Southland, everywhere adding grace and beauty to the surroundings, and blooming profusely throughout the year.

Bride (T.). Beautiful buds of perfect form, pure white, free bloomer.

Bridesmaid (T.). Same, except in color, which is clear deep pink.

Cardinal (H. T.). A new red rose of great promise, vigorous grower large well-formed flowers freely produced.

Etoile de France (H. T.). The Gold Medal rose of France, a splendid new rose, dazzling velvety crimson, well-formed flowers, very freely produced and very fragrant. The most beautiful rose of its color.

Francisca Kruger (T.). Deep copper yellow with lighter shadings, beautiful pointed buds, and a constant bloomer.

Hermosa (B.). Spanish for beautiful, a charming little silvery pink rose, always in bloom, very double and sweet.

Helen Good (T.). Delicate yellow, suffused with pink, each petal edged deeper, very large, well-formed flowers, freely produced. A genuine Cochet rose, should be in every collection.

Helen Gould (H. T.). Bright cherry or light crimson, very full and sweet and constantly in bloom, endures drouth and is one of the most desirable.

Kaiserin Augusta Victoria (H. T.). Pure white, very large, double and sweet.

Madam Caroline Testout (H. T.). Satiny pink, very large, fine flower and free bloomer, resembles La France.

Maman Cochet (T.). The queen of all pink garden roses, elegant, long, pointed buds of great substance, large, full and double when fully opened.

Marechal Niel (Climbing). Beautiful deep sulphur yellow, very large and fragrant. Price 50c each,

Paul Neyron (H. R.). Deep rose pink, said to be the largest rose, known. Strong grower, very hardy and popular.

Queens Scarlet. An old favorite China rose, vigorous grower, always in bloom.

White Maman Cochet (T.). Queen of all the white roses, identical with Maman Cochet, except in color, which is snow white, but sometimes tinged with pink. Unexcelled.

Ulrich Bruner (H. R.). Very large, full globular flowers, deep rich crimson, very sweet, much resembles American Beauty, very hardy.

HARDY CLIMBING ROSES

Crimson Rambler. Immense panicles of deep crimson flowers in spring, vigorous grower, hardy far north.

Dorothy Perkins. Beautiful soft shell pink flowers, profusely in large clusters, very fragrant and lasting, most beautiful glossy foliage, very strong grower.

Empress of China. A good, hardy ever-blooming climber, color rosy pink.

Description. (T.) Tea Rose; (H. T.) Hybrid Tea; (H. R.) Hybrid Remontant extremely (hardy); (H. N.) Hybrid Noisette. (B.) Bourbon.

PRICE OF ROSES

	Each	10	100
Strong field-grown plants, 2 years old		3.00	25.00
3 and 4 years old	59		

KUDZU VINE

"Jack and the Bean Stalk"

The most rapid-growing of all hardy vines, often making a growth of fifty to seventy-five feet, and sometimes more in one season. The luxuriant growth and heavy foliage continues till checked by freezing weather. It has clusters of delightfully fragrant purple flowers in summer and autumn. The leaves are most abundant, large, bold, beautiful, clear deep green; admirable where dense shade is desired; fine for porches, screens, and for covering fences, rockeries, old trees, buildings, etc., clothing with loyliness whatever it touches.

This vine was brought to America by the Japanese to use in their exhibit at the Centennial Exposition at Philadelphia in 1876. We secured plants soon after, and have been growing it for nearly thirty years. **We**

now have the largest stock in America.

A Forage Plant of Great Merit for the South

In Florida it has been tested and found by analysis to have greater feed value than alfalfa, and produces several tons per acre. It is a perennial plant and once established improves year after year. Flourishes in our Texas soils. Each Price: Good, strong, well-rooted one-year vines. \$.25 \$ 2.00 \$ 15.00 Extra large, 2 and 3 years, heavily rooted, each. 50c to \$1.00

TEAS' WHITE FLOWERING AMERICAN RED BUD OR JUDAS TREE

(Cercis Canadensis Alba)

A pure snow-white form of the beautiful Red Bud which adorns our native woods in early spring. Of vigorous growth, healthy, long-lived and free from the attack of insects or diseases and flourishes in almost any soil or situation.

An admirable tree for lawns, parks, cemeteries, etc., forming a pleasing

contrast when planted near the red flowering variety.

Price: Good trees of blooming size, 4 to 5 feet, \$1.50 each; extra large specimens, \$3.00 to \$5.00 each. Fine Red flowering, 4 to 5 feet, 50c each.

TEAS' WEEPING MULBERRY

This finest of all weeping trees originated in our nurseries some twenty-five years ago. It forms a perfect umbrella-shaped top, with long slender willowy branches drooping to the ground. It's beautiful glossy foliage and perfect form renders it an ornament on lawn or landscape, and it has now become a familiar object wherever fine trees are planted in this and foreign lands.

Price: Well-developed trees, each\$1.50 to \$2.50

TAMARISK

Tamarisk, or Salt Cedar, for Windbreaks and Ornamentai Hedges. A very beautiful, silvery foliage shrub or small tree which flourishes by the sea shore and is one of the most valuable plants for windbreaks or ornamental hedges, Its masses of pink blossoms contrasting with the light airy foliage forms an attractive ornament on the lawn, which may be clipped into any desired form or allowed to attain its natural height of twelve to twenty feet.

Amurense. From Siberia, the strongest growing and most highly recommended of the many varieties for these purposes. Strong plants.

Protect your crange grove with a Tamarisk windbreak.

THE ORIGINAL WESTMORELAND ORANGE TREE NEAR SEABROOK, TEXAS
